Soil and Water

EFFECTS OF WATERTABLE DEPTH, IRRIGATION WATER SALINITY, AND FERTILIZER APPLICATION ON ROOT ZONE SALT BUILDUP
R.M. Patel, S.O. Prasher and R.B. Bonnell .................................................. 111

Power and Machinery

REDUCED DRIFT FROM AIR-ASSISTED SPRAYING
M. Piché, B. Panneton and R. Thériault .................................................. 117

SENSORS TO MEASURE MASS-FLOW-RATE THROUGH A FORAGE HARVESTER
H. Martel and P. Savoie ........................................................................... 123

Bioprocessing Engineering

TREATMENT OF SLAUGHTERHOUSE WASTEWATER IN ANAEROBIC SEQUENCING BATCH REACTORS
D.I. Massé and L. Masse .......................................................... 131

CHARACTERIZATION OF WASTEWATER FROM HOG SLAUGHTERHOUSES IN EASTERN CANADA AND EVALUATION OF THEIR IN-PLANT WASTEWATER TREATMENT SYSTEMS
D.I. Massé and L. Masse .......................................................... 139

Information and Computer Technologies

APPLICATION OF ARTIFICIAL NEURAL NETWORKS IN IMAGE RECOGNITION AND CLASSIFICATION OF CROP AND WEEDS
C.-C. Yang, S.O. Prasher, J.-A. Landry and A. DiTommaso ...................... 147

Technical Note

MECHANICAL DEWATERING OF CHOPPED ALFALFA USING AN EXPERIMENTAL PISTON-CYLINDER ASSEMBLY
Canadian Agricultural Engineering publishes papers covering the general fields of Agricultural, Food, and Biosystems Engineering that fit into one of the following classifications: (1) a scientific paper based on original research; (2) a technical paper based on design, development, testing or analysis of machines, equipment, structures, processes, or practice; (3) a general paper on education relative to curricula and philosophy or trends in science, on a survey or investigation of some phase of research or research methods, or on extension or extension methods.

Manuscripts for publication should be submitted to the Editor. The papers must be original and must have not been published elsewhere in a refereed publication or copyrighted. Authors are required to suggest three or more potential referees. Before publication, all authors must complete an Assignment of Copyright to CSAE/SCGR. The author(s), not CSAE/SCGR, is (are) responsible for opinions expressed. Information published in Canadian Agricultural Engineering may be quoted in whole or part provided that credit is given to the author(s) and to the journal. Publication charges are $75/page plus cost of translation, if required. Reprint charges are $16/page for 100 copies.

All claims for missing issues must be made to the address below.
NOTES TO CONTRIBUTORS

The Editorial Board will assess suitability and essential detail of papers submitted for publication in Canadian Agricultural Engineering. One or more reviewers will be used. Their comments and suggestions will be compiled and submitted to the author. The review will ensure that:

1. A research paper presents a piece of research carried to a well-defined stage of advancement and the conclusions are adequately supported by the experimental results.

2. A technical paper presents a clear, concise, and factual outline and interpretation of the development, design, test, or analysis under consideration and that it is a contribution in one of the fields of agricultural, biosystems, or food engineering.

3. A general paper on education, research, or extension is pertinent to major changes in curriculum, research, or extension or to forward-looking developments in these areas.

4. A technical note on equipment development, technique of measurement, or method of analysis will have an application for other workers in the fields of agricultural, biosystems, or food engineering.

MANUSCRIPT

The manuscript should be typed double-spaced on paper 216 x 279 mm (8.5" x 11") with margins not less than 30 mm. The first page should contain only the title, authors' names, addresses (including postal codes), and contribution number where applicable. The telephone number, FAX number, and E-mail address of the corresponding author should also be included. Tables and captions for illustrations should be on separate pages, placed after the text. Manuscript paper with numbered lines is preferred. Five copies are required. After a paper has been accepted for publication, the author will be expected to provide a copy of the paper in electronic form in a format compatible with MS-DOS systems.

The title of the paper should give an accurate description of the article, using key words that can be used for computer-indexing.

ORGANIZATION

The paper should be organized to conform with present Journal practice. See Norum and Jayas (1995). All papers must include a short abstract section of about 200 words. Authors are encouraged to submit the abstract in both English and French. There will be a charge for translation services that must be provided by the Journal.

Major headings - Center on page with all words in capital letters.

Subheadings - Start at left-hand margin, capitalize first letter.

Sub-subheadings - Same as subheadings but underline.

Technical and detailed information should be included only in the form of description, table, graph, chart or photograph. In general, follow the style given in Norum and Jayas (1995).

References

List references alphabetically by authors at the end. Follow the format set by Norum and Jayas (1995). Material in press, with the name of the journal, may be used as a reference. Private communications and unpublished reports should be referred to in parentheses in the text. Private communications should include the person's title and address. Avoid the use of footnotes. Use the author-date system in the manuscript when referring to articles in the Reference section.

Tables

Designate tables at the top by table number (Roman numerals) and title, in upper and lower case letters. All headings and other information in tables are to be in lower case except first letter of first word. Keep the table compact and place it across the page wherever possible. Do not use vertical lines.

Measurements

Only metric system (SI) units are to be used.

Equations

Equations and formulas must be set up clearly. Use capitals for symbols as much as possible and lower case for superscripts and subscripts. Greek and other characters should be identified clearly. Equations should be numbered on the right-hand margin and in line with the center of the equation.

Abbreviations

Abbreviate units of measure only when used with numerals. Use correct SI unit abbreviations. Do not use abbreviations in the title.

ILLUSTRATIONS

Either original drawings or glossy photographs are acceptable for illustrations. An illustration should be planned to fit, after reduction, into a space 90 mm wide (one column) or 183 wide (two columns). The original should be not more than three times the size of the final figure. For identification, the figure number and author's name should be written on the lower left corner with soft pencil.

Line drawings should be machine produced on white drawing paper or tracing paper. Authors are encouraged to produce drawings using one of the commonly used computer packages. Letters, numerals, labels and axis captions should have only the first word capitalized. Axis captions should be followed by a comma, the symbol in italics, and the units in parentheses [i.e. Acceleration of particle, Ap (m/s²)]. If a symbol is not used, omit the comma. Letters and numerals must be at least 1.5 mm high and preferably 2 mm high in final form. Curves on graphs must be 0.3 mm wide after reduction. Axes lines should be clearly visible but inconspicuous; a width of 0.2 mm after reduction is suggested. Figure numbers and captions should be typed on a separate page, not on the original illustrations. When a paper is submitted for publication, the original illustrations need not be provided so long as the copies are of such quality that reviewers can understand them. Original drawings must be provided when the paper is accepted for publication. If a drawing has been produced by a computer package, a copy of the file should be submitted on disk at the time that the manuscript is submitted on disk (JPEG format preferred).

DISCUSSIONS

Discussions may be submitted on any paper or technical note published in the Journal for a period of not more than four months following publication. Discussion of a paper or technical note is open to anyone who has significant comments or questions about the content of the paper/technical note. A discussion will not be accepted for publication if it contains material readily found elsewhere, is purely speculative, introduces personalities, or otherwise falls below the standards of a technical paper in a professional journal. Authors will be given an opportunity to reply to discussions.

The format for discussions differs from those of papers in that figures are to be identified by capital letters to avoid confusion with the original paper. The discussor should refer to him/herself as "the writer" or "I" and to the author of the original paper as "the author." The first page shows the title of the original paper with a footnote to identify the author, volume, page, and date. Name and address of the writer of the discussion follow the title.

Discussions will be reviewed by the Editorial Board and possibly the reviewers of the original paper. The length of a discussion is restricted to one journal page. Lengthy discussions will be returned for shortening, or the writer may be encouraged to submit a paper or technical note.
